PDSOFT-Pipe Designing and Drawing

PDSOFT-Pipe Designing and Drawing

Model : <<Pipeline Prefabricated Design System>>PDSOFT 3DPiping V1.0

Performance :

High-speed drawing : This program is used for drawing kinds of pipeline design.

Derived information: This program can reduce a drawing to a pipeline prefabrication program.

Design: After install the IDF, you don't need to re-modeling; It can also adopt foreign IDF documents (such as PDS, PDMS) directly. So this program can use advanced PDS of PDMS programs and databases, and it also can combine the Chinese PDS with foreign PDS.

Technical parameter:

Establish pipeline-grade database: basis of design work

Establish pipeline database: basis of design work

Establish pipeline modeling: establish pipeline modeling under the single-elevation or the original map, the pipeline-grade database and pipeline database.

Create single line figure: automatic painted logo: pipe No., weld No., cutting pipe size, material lists and so on. It is good for pipe installation at the scene.

Create pipeline figure: automatic painted logo: welding line No., cutting pipe size, material lists and so on. It is good for pipeline prefabrication.
